

# Multi - Windows Application Environment

**One Windows System can control whole communication environment with multi-window display for target device .**

Multi-Window display can monitor and control multi-communication device simultaneously .

- (1) Telnet in LAN connection (when LAN available) .
- (2) Serial port connection for each device(Anytime, LAN available or down) .

Teraterm terminal emulator program with P640N card and F641N box are good choice for this application .
