# Getting to Know Your Switch

# 1.1 About the RGS-7244GP Industrial Switch

The RGS-7244GP is powerful managed industrial switch which have many features. The switch can work under wide temperature, dusty environment and humid condition. They can be managed by Windows Utility, WEB, TELNET and Console (CLI) or other third-party SNMP software as well.

# **1.2 Software Features**

- World's fastest Redundant Ethernet Ring (Recovery time < 20ms over 250 units connection)</li>
- Supports Ring Coupling, Dual Homing, RSTP over Ring
- Supports SNMPv1/v2c/v3 & RMON & Port base/802.1Q VLAN Network Management
- Event notification by Email and SNMP trap
- Windows Utility, Web-based ,Telnet and Console(CLI) configuration
- Enable/disable ports, MAC based port security
- Port based network access control (802.1x)
- VLAN (802.1q) to segregate and secure network traffic
- Radius centralized password management
- SNMPv3 encrypted authentication and access security
- RSTP (802.1w)
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1q) with double tagging and GVRP supported
- IGMP Snooping for multicast filtering
- Port configuration, status, statistics, mirroring, security
- Remote Monitoring (RMON)

# **1.3 Hardware Features**

- One 100~240VAC power input
- Operating Temperature: -10 to 60°C
- Storage Temperature: -40 to 85 °C
- Operating Humidity: 5% to 95%, non-condensing
- Casing: IP-30
- 24x 10/100/1000Base –T(X)
- 4 x 1000 Base-X SFP
- Console Port
- Dimensions : 443.7 (W) x 200 (D) x 44 (H) mm

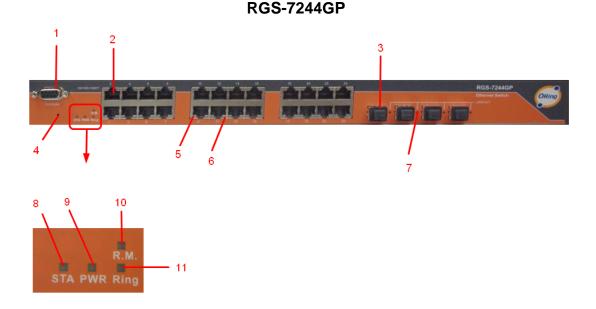

# Hardware Overview

# 2.1 Front Panel

The following table describes the labels that stick on the RGS-7244GP

Port	Description
Gigabit SFP ports	4 1000BaseX on SFP port
Gigabit Ethernet	24 10/100/1000Base –T(X)
Port	
Console	Use RS-232 with RJ-45 connecter to manage switch.

- 1. Console port (RJ-45)
- 2. 10/100/1000Base-T(X) gigabits Ethernet port
- 3. 1000Base-X Fiber port on SFP
- 4. Reset button. Push the button 3 seconds for reset; 5 seconds for factory default.
- 5. LED for Ethernet ports act status.
- 6. LED for Ethernet ports link status.
- 7. LED for SFP ports link status.
- 8. LED for STA When the PWR UP, the green led will be light on
- 9. LED for PWR

- 10. LED for R.M (Ring master). When the LED light on, it means that the switch is the ring master of Ring. , LED for Ring. When the led light on, it means the Ring is activated.
- 11. LED for Ring. When the led light on, it means the O-Ring is activated.

# 2.2 Rare Panel

The rare panel of RGS-7244GP is showed as below:

- 1. Power Switch.
- 2. Power input for AC 100V~240V / 50~60Hz.

# 2.3 Rack mount kit assembly

You can find the rack mount kit and the screws in the packing box. Please assembly the rack mount kit on the switch with screws as below picture.

# 2.4 Front Panel LEDs

LED	Color	Status	Description
STA	Green	On	DC power module up
PWR	Green	On	DC power module 1activated.
R.M	Green	On	Ring Master.
Ding	Green	On	Ring enabled.
		Slowly blinking	Ring has only One link. (lack
Ring			of one link to build the ring.)
		Fast blinking	Ring work normally.

10/100/1000Base-T(X) Giga Ethernet ports				
10/100 LINK	Amber	On	Port speed 10/100 link up.	
1000 LINK	Green	On	Port speed 1000 link up	
ACT	Amber	Blinking	Data transmitted.	
SFP				
LNK/ACT	Green	On	Port link up.	
		Blinking	Data transmitted.	

# **C**ables

# 3.1 Ethernet Cables

The RGS-7244GP switch has standard Ethernet ports. According to the link type, the switch use CAT 3, 4, 5,5e UTP cables to connect to any other network device (PCs, servers, switches, routers, or hubs). Please refer to the following table for cable specifications.

Cable	Туре	Max. Length	Connector
10BASE-T	Cat. 3, 4, 5 100-ohm	UTP 100 m (328 ft)	RJ-45
100BASE-TX	Cat. 5 100-ohm UTP	UTP 100 m (328 ft)	RJ-45
1000BASE-TX	Cat. 5/Cat. 5e 100-ohm UTP	UTP 100 m (328ft)	RJ-45

Cable Types and Specifications

### 3.1.1 100BASE-TX/10BASE-T Pin Assignments

With 100BASE-TX/10BASE-T cable, pins 1 and 2 are used for transmitting data, and pins 3 and 6 are used for receiving data.

Pin Number	Assignment
1	TD+
2	TD-
3	RD+
4	Not used
5	Not used
6	RD-
7	Not used
8	Not used

10/100 Base-T RJ-45 Pin Assignments

1000 Base-T RJ-45 Pin Assignments

Pin Number	Assignment
1	BI_DA+
2	BI_DA-
3	BI_DB+

4	BI_DC+
5	BI_DC-
6	BI_DB-
7	BI_DD+
8	BI_DD-

The RGS-7244GP switch support auto MDI/MDI-X operation. You can use a straight-through cable to connect PC to switch. The following table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

10/100 Base-T MDI/MDI-X pins assignment

Pin Number	MDI port	MDI-X port
1	TD+(transmit)	RD+(receive)
2	TD-(transmit)	RD-(receive)
3	RD+(receive)	TD+(transmit)
4	Not used	Not used
5	Not used	Not used
6	RD-(receive)	TD-(transmit)
7	Not used	Not used
8	Not used	Not used

1000 Base-T MDI/MDI-X pins assignment

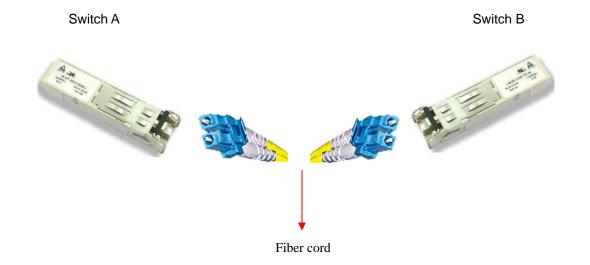

Pin Number	MDI port	MDI-X port
1	BI_DA+	BI_DB+
2	BI_DA-	BI_DB-
3	BI_DB+	BI_DA+
4	BI_DC+	BI_DD+
5	BI_DC-	BI_DD-
6	BI_DB-	BI_DA-
7	BI_DD+	BI_DC+
8	BI_DD-	BI_DC-

Note: "+" and "-" signs represent the polarity of the wires that make up each wire pair.

# 3.2 SFP

The Switch has fiber optical ports with SFP connectors. The fiber optical ports are in multi-mode (0 to 550M, 850 nm with 50/125  $\mu$ m, 62.5/125  $\mu$ m fiber) and single-mode with LC connector. Please remember that the TX port of Switch A should be connected to the RX port of Switch B.

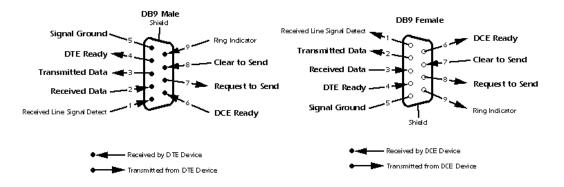

# 3.3 Console Cable

RGS-7244GP switch can be management by console port. The DB-9 to RJ-45 cable can be found in the package. You can connect them to PC via a RS-232 cable with DB-9 female connector and the other end (RJ-45 connector) connects to console port of switch.

PC pin out (male) assignment	RS-232 with DB9 female connector	DB9 to RJ 45
Pin #2 RD	Pin #2 TD	Pin #2
Pin #3 TD	Pin #3 RD	Pin #3
Pin #5 GD	Pin #5 GD	Pin #5

# WEB Management

Warning!!!. While making any establishment and upgrading firmware, please remove physical loop connection first. DO NOT power off equipment during firmware is upgrading!

# 4.1 Configuration by Web Browser

This section introduces the configuration by Web browser.

#### 4.1.1 About Web-based Management

An embedded HTML web site resides in flash memory on the CPU board. It contains advanced management features and allows you to manage the switch from anywhere on the network through a standard web browser such as Microsoft Internet Explorer.

The Web-Based Management function supports Internet Explorer 5.0 or later. It is based on Java Applets with an aim to reduce network bandwidth consumption, enhance access speed and present an easy viewing screen.

**Note:** By default, IE5.0 or later version does not allow Java Applets to open sockets. You need to explicitly modify the browser setting in order to enable Java Applets to use network ports.

#### **Preparing for Web Management**

The default value is as below: IP Address: **192.168.10.1** Subnet Mask: **255.255.255.0** Default Gateway: **192.168.10.254** User Name: **admin** Password: **admin** 

#### System Login

- 1. Launch the Internet Explorer.
- 2. Type http:// and the IP address of the switch. Press "Enter".

<u>Eile E</u> dit	<u>V</u> iew F <u>a</u> vorites <u>T</u> ools	Help								1
G Back	- 🕥 - 🗷 🖻 🏠	🔎 Search	A Favorites	Ø	s 🛃	<b>.</b>	-28			
A <u>d</u> dress	http://192.168.10.1						~	🔁 Go	Links	»

- 3. The login screen appears.
- 4. Key in the username and password. The default username and password is "admin".
- 5. Click "Enter" or "OK" button, then the main interface of the Web-based management appears.

## 4.1.2 Basic Setting

## 4.1.2.1 System Information

The switch system information is provided here.

System Information Configuration				
System Name	RGS-7244GP			
System Description	Industrial 28-port rack mount ma			
System Location				
System Contact				
System Timezone Offset (minutes)	0			

e Reset

Save

#### System Information interface

Label	Description
	The textual identification of the contact person for this managed
System Contact	node, together with information on how to contact this person.
	The allowed string length is 0 to 255, and the allowed content is
	the ASCII characters from 32 to 126.
	An administratively assigned name for this managed node. By
	convention, this is the node's fully-qualified domain name. A
	domain name is a text string drawn from the alphabet (A-Z, a-z),
System Name	digits (0-9), minus sign (-). No space characters are permitted as
	part of a name. The first character must be an alpha character.
	And the first or last character must not be a minus sign. The
	allowed string length is 0 to 255.
	The physical location of this node(e.g., telephone closet, 3rd
System Location	floor). The allowed string length is 0 to 255, and the allowed
	content is the ASCII characters from 32 to 126.
	Enter the name of contact person or organization
Timezone Offset	Provide the time zone offset relative to UTC/GMT.
	The offset is given in minutes east of GMT. The valid range is from
	-720 to 720 minutes.

Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.

# 4.1.2.2 Admin & Password

This page allows you to configure the system password required to access the web pages or log in from CLI.

System Password				
Old Password				
New Password				
Confirm New Password				
Save				

Label	Description
Old Password	Enter the current system password. If this is incorrect, the new
	password will not be set.
New Password	The system password. The allowed string length is 0 to 31, and
	the allowed content is the ASCII characters from 32 to 126.
Confirm password	Re-type the new password.
Save	Click to save changes.

# 4.1.2.3 IP Setting

Configure the switch-managed IP information on this page.

# **IP** Configuration

	Configured	Current
DHCP Client	×	Renew
IP Address	192.168.10.10	192.168.10.10
IP Mask	255.255.255.0	255.255.255.0
IP Router	0.0.0	0.0.0
VLAN ID	1	1
SNTP Server		

Label	Description
DHCP Client	Enable the DHCP client by checking this box. If DHCP fails and
	the configured IP address is zero, DHCP will retry. If DHCP fails
	and the configured IP address is non-zero, DHCP will stop and
	the configured IP settings will be used. The DHCP client will
	announce the configured System Name as hostname to provide
	DNS lookup.
IP Address	Assign the IP address that the network is using. If DHCP client
	function is enabling, you do not need to assign the IP address.
	The network DHCP server will assign the IP address for the
	switch and it will be display in this column. The default IP is
	192.168.10.1
IP Mask	Assign the subnet mask of the IP address. If DHCP client function
	is enabling, you do not need to assign the subnet mask
IP Router	Assign the network gateway for the switch. The default gateway
	is 192.168.10.254
VLAN ID	Provide the managed VLAN ID. The allowed range is 1 through
	4095.
SNTP Server	SNTP is an acronym for Simple Network Time Protocol, a network
	protocol for synchronizing the clocks of computer systems. SNTP
	uses UDP (datagrams) as transport layer.

Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.
Renew	Click to renew DHCP. This button is only available if DHCP is enabled.

## 4.1.2.4 HTTPS

HTTPS C	onfigu	iration	
Mode	Enabled V Disabled V		
Automatic Redirect	Disabled 💌		
	22/22/22/26

Reset	Click to undo any changes made locally and revert to previously
Reset	saved values.

### 4.1.2.6 LLDP

#### **LLDP Parameters**

This page allows the user to inspect and configure the current LLDP port settings.

LLDP	Parameters
------	------------

Tx Interval	30	seconds
Tx Hold	3	times
Tx Delay	2	seconds
Tx Reinit	2	seconds

3		2		C	<b>Optional TLV</b>	s	
Port	Mode	CDP aware	Port Descr	Sys Name	Sys Descr	Sys Capa	Mgmt Addr
1	Enabled 💌	<b>V</b>			~	<b>V</b>	~
2	Enabled 💌				<b>V</b>		<b>V</b>
3	Enabled 💌	~	<b>~</b>	<b>~</b>	~	<b>v</b>	1
4	Enabled 💌	<b>V</b>			~	<ul> <li>Image: A start of the start of</li></ul>	<ul> <li>Image: A start of the start of</li></ul>
5	Enabled 💌	<b>~</b>		<b>V</b>	~	<b>V</b>	~
6	Enabled 💌				<b>~</b>		<b>V</b>

Label	Description
Tx Interval	The switch is periodically transmitting LLDP frames to its neighbors for having the network discovery information up-to-date. The interval between each LLDP frame is determined by the Tx Interval value. Valid values are restricted to 5 - 32768

	seconds.
	Each LLDP frame contains information about how long the
Tx Hold	information in the LLDP frame shall be considered valid. The
	LLDP information valid period is set to Tx Hold multiplied by Tx
	Interval seconds. Valid values are restricted to 2 - 10 times.
	If some configuration is changed (e.g. the IP address) a new
	LLDP frame is transmitted, but the time between the LLDP frames
Tx Delay	will always be at least the value of Tx Delay seconds. Tx Delay
	cannot be larger than 1/4 of the Tx Interval value. Valid values are
	restricted to 1 - 8192 seconds.
	When a port is disabled, LLDP is disabled or the switch is
	rebooted a LLDP shutdown frame is transmitted to the
Tx Reinit	neighboring units, signaling that the LLDP information isn't valid
ix Remit	anymore. Tx Reinit controls the amount of seconds between the
	shutdown frame and a new LLDP initialization. Valid values are
	restricted to 1 - 10 seconds.

### LLDP Port Configuration

Label	Description
Port	The switch port number of the logical LLDP port.
Mode	<ul> <li>Select LLDP mode.</li> <li>Rx only The switch will not send out LLDP information, but LLDP information from neighbor units is analyzed.</li> <li>Tx only The switch will drop LLDP information received from neighbors, but will send out LLDP information.</li> <li>Disabled The switch will not send out LLDP information, and will drop LLDP information received from neighbors.</li> <li>Enabled The switch will send out LLDP information, and will analyze LLDP information received from neighbors.</li> </ul>
CDP Aware	Select CDP awareness. The CDP operation is restricted to decoding incoming CDP frames (The switch doesn't transmit CDP frames). CDP frames are only decoded if LLDP for the port is enabled. Only CDP TLVs that can be mapped into a corresponding field in

	1
	the LLDP neighbors table are decoded. All other TLVs are
	discarded (Unrecognized CDP TLVs and discarded CDP frame
	are not shown in the LLDP statistic. Only ). CDP TLVs are
	mapped into LLDP neighbors table as shown below.
	CDP TLV "Device ID" is mapped into the LLDP "Chassis ID" field.
	CDP TLV "Address" is mapped into the LLDP "Management
	Address" field. The CDP address TLV can contain multiple
	addresses, but only the first address is shown in the LLDP
	neighbors table.
	CDP TLV "Port ID" is mapped into the LLDP "Port ID" field.
	CDP TLV "Version and Platform" is mapped into the LLDP
	"System Description" field.
	Both the CDP and LLDP supports "system capabilities", but the
	CDP capabilities cover capabilities that are not part of the LLDP.
	These capabilities are shown as "others" in the LLDP neighbors
	table.
	If all ports have CDP awareness disabled the switch forwards
	CDP frames received from neighbor devices. If at least one port
	has CDP awareness enabled all CDP frames are terminated by
	the switch.
	Note: When CDP awareness for a port is disabled the CDP
	information isn't removed immediately, but will be removed when
	the hold time is exceeded.
	Optional TLV: When checked the "port description" is included in
Port Descr	LLDP information transmitted.
	Optional TLV: When checked the "system name" is included in
Sys Name	LLDP information transmitted.
	Optional TLV: When checked the "system description" is included
Sys Descr	in LLDP information transmitted.
	Optional TLV: When checked the "system capability" is included in
Sys Capa	LLDP information transmitted.
	Optional TLV: When checked the "management address" is
Mgmt Addr	included in LLDP information transmitted.

#### **LLDP Neighbor Information**

This page provides a status overview for all LLDP neighbors. The displayed table contains a row for each port on which an LLDP neighbor is detected. The columns hold the following information:

### **LLDP Neighbor Information**

Auto-refresh 🗌 Refresh

Entries Deleted	Shows the number of new entries deleted since switch reboot.					
Total Neighbors	Shows the number of LLDP frames dropped due to that the entry					
Entries Dropped	table was full.					
Total Neighbors	Shows the number of entries deleted due to Time-To-Live					
Entries Aged Out	expiring.					

#### **Local Counters**

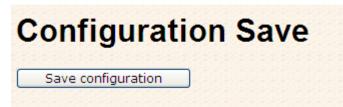

Label	Description
Local Port	The port on which LLDP frames are received or transmitted.
Tx Frames	The number of LLDP frames transmitted on the port.
Rx Frames	The number of LLDP frames received on the port.
Rx Errors	The number of received LLDP frames containing some kind of

	error.
	If an LLDP frame is received on a port, and the switch's internal
	table has run full, the LLDP frame is counted and discarded. This
	situation is known as "Too Many Neighbors" in the LLDP
France Disconded	standard. LLDP frames require a new entry in the table when the
Frames Discarded	Chassis ID or Remote Port ID is not already contained within the
	table. Entries are removed from the table when a given port links
	down, an LLDP shutdown frame is received, or when the entry
	ages out.
TLVs Discarded	Each LLDP frame can contain multiple pieces of information,
	known as TLVs (TLV is short for "Type Length Value"). If a TLV is
	malformed, it is counted and discarded.
	The number of well-formed TLVs, but with an unknown type
TLVs Unrecognized	value.
Org. Discarded	The number of organizationally TLVs received.
	Each LLDP frame contains information about how long time the
Are Oute	LLDP information is valid (age-out time). If no new LLDP frame is
Age-Outs	received within the age out time, the LLDP information is
	removed, and the Age-Out counter is incremented.
Refresh	Click to refresh the page immediately.
	Clears the local counters. All counters (including global counters)
Clear	are cleared upon reboot.
	Check this box to enable an automatic refresh of the page at
Auto-refresh	I CHECK THIS DUX TO CHADIC ALL AUTOHIATIC TEHESH OF THE DATE AT I

## 4.1.2.7 Backup/Restore Configuration

You can save/view or load the switch configuration. The configuration file is in XML format with a hierarchy of tags:

## 4.1.2.8 Firmware Update

This page facilitates an update of the firmware controlling the stack. switch.

# 4.1.3 DHCP Server

#### 4.1.3.1 Setting

The system provides with DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

DHCP Se	DHCP Server Configuration						
Enabled							
Start IP Address	192.168.10.100						
End IP Address	192.168.10.200						
Subnet Mask	255.255.255.0						
Router	192.168.10.254						
DNS	192.168.10.254						
Lease Time (sec.)	86400						
TFTP Server	0.0.00						
Boot File Name							
Save Reset							

### 4.1.3.2 DHCP Dynamic Client List

When the DHCP server function is activated, the system will collect the DHCP client information and display in here.

DHCP Dynamic Client List							
No.	Select	Туре	MAC Address	IP Address	Surplus Lease		
Sel	lect/Clear A		Add to static Table	e			

### 4.1.3.3 DHCP Client List

You can assign the specific IP address which is in the assigned dynamic IP range to the specific port. When the device is connecting to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before in the connected device.

DHCP	Clie	nt List		
MAC Address IP Address				
Add as Statio	:			
No. Select	Туре	MAC Address	IP Address	Surplus Lease
Delete Se	elect/Clear	· All Send to	IP-Police	

### 4.1.4 Port Setting 4.1.4.1 Port Control

This page displays current port configurations. Ports can also be configured here.

## **Port Configuration**

10		Down	Auto	~	x	×		9600	Discard 🛩	Disabled V	

Label	Description
Port	This is the logical port number for this row.
Link	The current link state is displayed graphically. Green indicates the
LINK	link is up and red that it is down.
Current Link Speed	Provides the current link speed of the port.
	Select any available link speed for the given switch port.
Configured Link	Auto Speed selects the highest speed that is compatible with a
Speed	link partner.
	Disabled disables the switch port operation.
	When Auto Speed is selected for a port, this section indicates the
	flow control capability that is advertised to the link partner.
	When a fixed-speed setting is selected, that is what is used. The
	Current Rx column indicates whether pause frames on the port
Flow Control	are obeyed, and the Current Tx column indicates whether pause
	frames on the port are transmitted. The Rx and Tx settings are
	determined by the result of the last Auto-Negotiation.
	Check the configured column to use flow control. This setting is
	related to the setting for Configured Link Speed.
Maximum Frame	Enter the maximum frame size allowed for the switch port,
	including FCS. The allowed range is 1518 bytes to 9600 bytes.
Excessive Collision	Configure port transmit collision behavior.
Mode	Discard: Discard frame after 16 collisions (default).
WOUC	Restart: Restart back-off algorithm after 16 collisions.

	The Usage column shows the current percentage of the power							
	consumption per port. The Configured column allows for changing							
	the power savings mode parameters per port.							
Power Control	Disabled: All power savings mechanisms disabled.							
	ActiPHY: Link down power savings enabled.							
	PerfectReach: Link up power savings enabled.							
	Enabled: Both link up and link down power savings enabled.							
Total Power Usage	Total power usage in board, measured in percent.							
Save	Click to save changes.							
Reset	Click to undo any changes made locally and revert to previously							
Reset	saved values.							
Defreeh	Click to refresh the page. Any changes made locally will be							
Refresh	undone.							

### 4.1.4.2 Rate Limit

Configure the switch port rate limit for Policers and Shapers on this page.

Rate Limit Configuration											
Port	Policer Enabled	Policer Rate	Policer Unit	Shaper Enabled	Shaper Rate	Shaper Unit					
1		500	kbps 💌		500	kbps 💌					
2		500	kbps 💌		500	kbps 💌

8		500	kbps 💌		500	kbps 💌					
9		500	kbps 💌		500	kbps 💌					
10		500	kbps 💌		500	kbps 💌					

Label	Description
Port	The logical port for the settings contained in the same row.
Policer Enabled	Enable or disable the port policer. The default value is "Disabled".
Policer Rate	Configure the rate for the port policer. The default value is "500".
Policer Rate	This value is restricted to 500-1000000 when the "Policer Unit" is

	"kbps", and it is restricted to 1-1000 when the "Policer Unit" is
	"Mbps"
Policer Unit	Configure the unit of measure for the port policer rate as kbps or
Policer Unit	Mbps. The default value is "kbps".
Shaper Enabled	Enable or disable the port shaper. The default value is "Disabled".
	Configure the rate for the port shaper. The default value is "500".
Shapar Pata	This value is restricted to 500-1000000 when the "Policer Unit" is
Shaper Rate	"kbps", and it is restricted to 1-1000 when the "Policer Unit" is
	"Mbps"
Shanar Unit	Configure the unit of measure for the port shaper rate as kbps or
Shaper Unit	Mbps. The default value is "kbps".
Save	Click to save changes.
	Click to undo any changes made locally and revert to previously
Reset	saved values.
	Saveu values.

### 4.1.4.3 Port Trunk

### 4.1.4.3.1 Trunk Configuration

This page is used to configure the Aggregation hash mode and the aggregation group.

# **Aggregation Mode Configuration**

Hash Code Contribut	tors
<u>S</u> ource MAC Address	<b>~</b>
Destination MAC Address	
IP Address	<b>~</b>
TCP/UDP <u>P</u> ort Number	<b>~</b>

Label	Description
Source MAC Address	The Source MAC address can be used to calculate the
	destination port for the frame. Check to enable the use of the
	Source MAC address, or uncheck to disable. By default, Source
	MAC Address is enabled.
Destination MAC	The Destination MAC Address can be used to calculate the
Address	destination port for the frame. Check to enable the use of the
	Destination MAC Address, or uncheck to disable. By default,
	Destination MAC Address is disabled.
IP Address	The IP address can be used to calculate the destination port for

	the frame. Check to enable the use of the IP Address, or uncheck										
	to disable. By default, IP Address is enabled.										
TCP/UDP Port	The TCP/UDP port number can be used to calculate the										
Number	destination port for the frame. Check to enable the use of the										
	TCP/UDP Port Number, or uncheck to disable. By default,										
	TCP/UDP Port Number is enabled.

Label	Description
Group ID	Indicates the group ID for the settings contained in the same row.
	Group ID "Normal" indicates there is no aggregation. Only one
	group ID is valid per port.
Port Members	Each switch port is listed for each group ID. Select a radio button
	to include a port in an aggregation, or clear the radio button to
	remove the port from the aggregation. By default, no ports belong
	to any aggregation group. Only full duplex ports can join an
	aggregation and ports must be in the same speed in each group.

### 4.1.4.3.2 LACP Port Configuration

This page allows the user to inspect the current LACP port configurations, and possibly change them as well.

LACP Port Configuration									
Port	LACP Enabled	K	ey	Role					
1		Auto	×	Active	*				
2		Auto	✓	Active	*				
3		Auto	×	Active	*				
4		Auto	<ul> <li>Image: A state of the state of</li></ul>	Active	*				
5		Auto	×	Active	*				
6		Auto	<ul> <li>Image: A set of the set of the</li></ul>	Active	*				
7		Auto	×	Active	~				
8		Auto	✓	Active	~				
9		Auto	✓	Active	*				
10		Auto	✓	Active	~				
11		Auto	<b>~</b>	Active	*				

Label	Description
Port	Indicates the group ID for the settings contained in the same row.
	Group ID "Normal" indicates there is no aggregation. Only one
	group ID is valid per port.
LACP Enabled	Each switch port is listed for each group ID. Select a radio button
	to include a port in an aggregation, or clear the radio button to
	remove the port from the aggregation. By default, no ports belong
	to any aggregation group. Only full duplex ports can join an
	aggregation and ports must be in the same speed in each group.
Кеу	The Key value incurred by the port, range 1-65535 . The Auto
	setting will set the key as appropriate by the physical link speed,
	10Mb = 1, $100Mb = 2$ , $1Gb = 3$ . Using the Specific setting, a
	user-defined value can be entered. Ports with the same Key value
	can participate in the same aggregation group, while ports with
	different keys cannot.
Role	The Role shows the LACP activity status. The Active will transmit
	LACP packets each second, while Passive will wait for a LACP
	packet from a partner (speak if spoken to).

Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.

### 4.1.4.3.3 LACP System Status

This page provides a status overview for all LACP instances.

LACF	<b>Syste</b>	m Sta	atus	
Auto-refresh	Refresh			
Aggr ID	Partner System ID	Partner	Last Changed	Local Ports
	Suctor ID	L au	Changed	

Label	Description
Aggr ID	The Aggregation ID associated with this aggregation instance. For
	LLAG the id is shown as 'isid:aggr-id' and for GLAGs as 'aggr-id'
Partner System ID	The system ID (MAC address) of the aggregation partner.
Partner Key	The Key that the partner has assigned to this aggregation ID.
Last Changed	The time since this aggregation changed.
Last Channged	Shows which ports are a part of this aggregation for this
	switch/stack. The format is: "Switch ID:Port".
Refresh	Click to refresh the page immediately.
Auto-refresh	Check this box to enable an automatic refresh of the page at
Auto-reliesn []	regular intervals.

### 4.1.4.3.4 LACP Status

This page provides a status overview for LACP status for all ports.

Part LACD Kay Agent D Pa					rtner Partne				
Port	LACP	Key	Aggr ID	System ID	Port				
1	No	23	-1						
2	No	-	-	2	-				
3	No	- 23	-	2	12

23	No	- 23	-	12	12				
24	No	1	2	-	-				
25	No	-	-	12	12				
26	No	-	-	2	-				
27	No	2	-	12	12				
28	No	1	-	2	-				

Label	Description
Port	The switch port number.
LACP	'Yes' means that LACP is enabled and the port link is up. 'No'
	means that LACP is not enabled or that the port link is down.
	'Backup' means that the port could not join the aggregation group
	but will join if other port leaves. Meanwhile it's LACP status is
	disabled.
Кеу	The key assigned to this port. Only ports with the same key can

	aggregate together.
Aggr ID	The Aggregation ID assigned to this aggregation group.
Partner System ID	The partners System ID (MAC address).
Partner Port	The partners port number connected to this port.
Refresh	Click to refresh the page immediately.
Auto-refresh	Check this box to enable an automatic refresh of the page at regular intervals.

### 4.1.4.3.5 LACP Statistics

This page provides an overview for LACP statistics for all ports.

# **LACP Statistics**

Auto-refresh 🗌 Refresh Clear

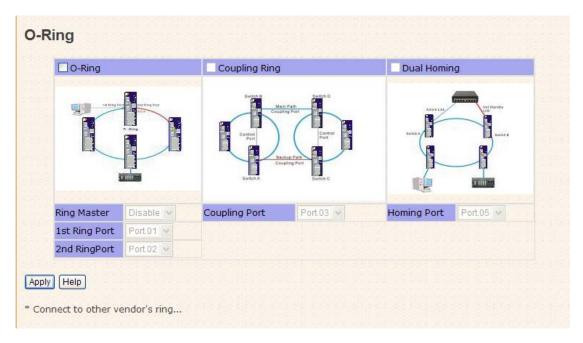

Dout	LACP			ded

25	0	0	0	0
26	0	0	0	0
27	0	0	0	0
28	0	0	0	0

Label	Description
Port	The switch port number
LACP Transmitted	Shows how many LACP frames have been sent from each port
LACP Received	Shows how many LACP frames have been received at each port.
Discarded	Shows how many unknown or illegal LACP frames have been
	discarded at each port.
Refresh	Click to refresh the page immediately.
Auto-refresh	Check this box to enable an automatic refresh of the page at
Auto-reliesh []	regular intervals.
Clear	Clears the counters for all ports

### 4.1.5 Redundancy 4.1.5.1 O-Ring

Ring is the most powerful Ring in the world. The recovery time of Ring is less than 10 ms. It can reduce unexpected damage caused by network topology change. Ring Supports 3 Ring topology: Ring, Coupling Ring and Dual Homing.

Ring interface

The following table describes the labels in this screen.

Label	Description
Redundant Ring	Mark to enable Ring.
	There should be one and only one Ring Master in a ring.
	However if there are two or more switches which set Ring
Ring Master	Master to enable, the switch with the lowest MAC address will
	be the actual Ring Master and others will be Backup Masters.
1 <sup>st</sup> Ring Port	The primary port, when this switch is Ring Master.
2 <sup>nd</sup> Ring Port	The backup port, when this switch is Ring Master.
Coupling Ring	Mark to enable Coupling Ring. Coupling Ring can be used to
	divide a big ring into two smaller rings to avoid effecting all
	switches when network topology change. It is a good
	application for connecting two Rings.
Coupling Port	Link to Coupling Port of the switch in another ring. Coupling
	Ring need four switch to build an active and a backup link.
	Set a port as coupling port. The coupled four ports of four
	switches will be run at active/backup mode.
Dual Homing	Mark to enable Dual Homing. By selecting Dual Homing
	mode, Ring will be connected to normal switches through
	two RSTP links (ex: backbone Switch). The two links work as
	active/backup mode, and connect each Ring to the normal
	switches in RSTP mode.
Apply	Click "Apply" to set the configurations.

**Note:** We don't suggest you to set one switch as a Ring Master and a Coupling Ring at the same time due to heavy load.

### 4.1.5.2 MSTP

#### **Bridge Settings**

This page allows you to configure RSTP system settings. The settings are used by all RSTP Bridge instances in the Switch Stack.

Protocol Version	MSTP 💌	1		
Forward Delay	15			
Max Age	20			
Maximum Hop Count	20			
Transmit Hold Count	6			

Label	Description								
Protocol Version	The STP protocol version setting. Valid values are STP, RSTP								
Protocol version	and MSTP.								
	The delay used by STP Bridges to transition Root and Designated								
Forward Delay	Ports to Forwarding (used in STP compatible mode). Valid values								
	are in the range 4 to 30 seconds.								
	The maximum age of the information transmitted by the Bridge								
Max Age	when it is the Root Bridge. Valid values are in the range 6 to 40								
	seconds, and MaxAge must be <= (FwdDelay-1)*2.								
	This defines the initial value of remainingHops for MSTI								
	information generated at the boundary of an MSTI region. It								
Maximum Hop Count	defines how many bridges a root bridge can distribute its BPDU								
	information. Valid values are in the range 4 to 30 seconds, and								
	MaxAge must be <= (FwdDelay-1)*2.								
	The number of BPDU's a bridge port can send per second. When								
Transmit Hold Count	exceeded, transmission of the next BPDU will be delayed. Valid								
	values are in the range 1 to 10 BPDU's per second.								
Save	Click to save changes.								
Reset	Click to undo any changes made locally and revert to previously								
IVeset	saved values.								

### **MSTI** Mapping

This page allows the user to inspect the current STP MSTI bridge instance priority

configurations, and possibly change them as well.

Add VLANs separated by spaces or comma.

Unmapped VLANs are mapped to the CIST. (The default bridge instance).

Configuration Identificatio	n
Configuration Name	00-1e-94-96-00-00
<b>Configuration Revision</b>	0

STI	VLANs Mapped	
T1	the second second second second second	~
		Y
T2		~
		~
T3		~
		Y
T4		~
		~
T5		~
		Y
т6		~
		~
17		~
/		~

Label	Description								
	The name identifiying the VLAN to MSTI mapping. Bridges must								
	share the name and revision (see below), as well as the								
Configuration Name	VLAN-to-MSTI mapping configuration in order to share spanning								
	trees for MSTI's. (Intra-region). The name is at most 32								
	characters.								
Configuration	The revision of the MSTI configuration named above. This must								
Revision	be an integer between 0 and 65535.								
MSTI	The bridge instance. The CIST is not available for explicit								
MOTI	mapping, as it will receive the VLANs not explicitly mapped.								
	The list of VLAN's mapped to the MSTI. The VLANs must be								
VI ANS Mannad	separated with comma and/or space. A VLAN can only be								
VLANS Mapped	mapped to one MSTI. A unused MSTI should just be left empty.								
	(I.e. not having any VLANs mapped to it.)								
Save	Click to save changes.								

Reset	Click to undo any changes made locally and revert to previously
Reset	saved values.

#### **MSTI** Priorities

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

	riority Config	juration	-	2/2	2	22	22
MSTI	Priority	1000					
CIST	128 🛩						
MST1	128 💌						
MST2	128 💌						
MST3	128 💌	1000					
MST4	128 💌						
MST5	128 🗸						
MST6	128 🗸	20222					

## **MSTI Configuration**

Save	Reset
------	-------

Label	Description
MSTI	The bridge instance. The CIST is the default instance, which is
WIGTT	always active.
Deienite	Controls the bridge priority. Lower numerical values have better
	priority. The bridge priority plus the MSTI instance number,
Priority	concatenated with the 6-byte MAC address of the switch forms a
	Bridge Identifier.

5		Auto 🔽		128 💌	Edge	*	<ul><li>✓</li></ul>				Auto	~	
6		Auto 💙		128 💌	Edge	*	~				Auto	~	
7		Auto 💌		128 💌	Edge	~					Auto	*	
8		Auto 💙		128 💌	Edge	*	✓				Auto	~	
9		Auto 💌		128 💌	Edge	*					Auto	~	
10		Auto 🔽		128 💌	Edge	*	<b>~</b>				Auto	~	

Label	Description							
Port	The switch port number of the logical STP port.							
STP Enabled	Controls whether STP is enabled on this switch port.							
	Controls the path cost incurred by the port. The Auto setting will							
	set the path cost as appropriate by the physical link speed, using							
	the 802.1D recommended values. Using the Specific setting, a							
Path Cost	user-defined value can be entered. The path cost is used when							
	establishing the active topology of the network. Lower path cost							
	ports are chosen as forwarding ports in favor of higher path cost							
	ports. Valid values are in the range 1 to 200000000.							
Deioeiter	Controls the port priority. This can be used to control priority of							
Priority	ports having identical port cost. (See above).							
	Operational flag describing whether the port is connecting directly							
OpenEdge(setate	to edge devices. (No Bridges attached). Transitioning to the							
flag)	forwarding state is faster for edge ports (having operEdge true)							
	than for other ports.							
AdminEdge	Controls whether the operEdge flag should start as beeing set or							
Adminedge	cleared. (The initial operEdge state when a port is initialized).							
	Controls whether the bridge should enable automatic edge							
AutoEdge	detection on the bridge port. This allows operEdge to be derived							
	from whether BPDU's are received on the port or not.							
	If enabled, causes the port not to be selected as Root Port for the							
Restricted Role	CIST or any MSTI, even if it has the best spanning tree priority							
	vector. Such a port will be selected as an Alternate Port after the							

	Root Port has been selected. If set, it can cause lack of spanning							
	tree connectivity. It can be set by a network administrator to							
	prevent bridges external to a core region of the network							
	influencing the spanning tree active topology, possibly because							
	those bridges are not under the full control of the administrator.							
	This feature is also know as Root Guard.							
	If enabled, causes the port not to propagate received topology							
	change notifications and topology changes to other ports. If set it							
	can cause temporary loss of connectivity after changes in a							
	spanning trees active topology as a result of persistent incorrectly							
	learned station location information. It is set by a network							
Restricted TCN	administrator to prevent bridges external to a core region of the							
	network, causing address flushing in that region, possibly							
	because those bridges are not under the full control of the							
	administrator or is the physical link state for the attached LANs							
	transitions frequently.							
	Controls whether the port connects to a point-to-point LAN rather							
	than a shared medium. This can be automatically determined, or							
Point2Point	forced either true or false. Transition to the forwarding state is							
	faster for point-to-point LANs than for shared media.							
Save	Click to save changes.							
	Click to undo any changes made locally and revert to previously							
Reset	saved values.							

#### **MSTI** Ports

This page allows the user to inspect the current STP MSTI port configurations, and possibly change them as well. A MSTI port is a virtual port, which is instantiated seperately for each active CIST (physical) port for each MSTI instance configured and applicable for the port. The MSTI instance must be selected before displaying actual MSTI port configuration options. This page contains MSTI port settings for physical and aggregated ports. The aggregation settings are stack global.

### STP Bridges

This page provides a status overview for all STP bridge instances.

The displayed table contains a row for each STP bridge instance, where the column displays the following information:

Druge ID	ID	Port	Cost	Flag	Change Las	
Bridge ID	Root			Topology	Topology Change Last	
	h 🗌 Refresh	Bridge ID Root	Bridge ID Root	Bridge ID Root	Bridge ID Root Topology	

Label	Description
MSTI	The Bridge Instance. This is also a link to the STP Detailed Bridge
M311	Status.
Bridge ID	The Bridge ID of this Bridge instance.
Root ID	The Bridge ID of the currently elected root bridge.
Root Port	The switch port currently assigned the root port role.
	Root Path Cost. For the Root Bridge this is zero. For all other
Root Cost	Bridges, it is the sum of the Port Path Costs on the least cost path
	to the Root Bridge.
Topology Flag	The current state of the Topology Change Flag for this Bridge
	instance.
Topology Change	The time since last Topology Change occurred.
Last	The time since last ropology change occurred.
Refresh	Click to refresh the page immediately.
Auto-refresh	Check this box to enable an automatic refresh of the page at
Auto-reliesh	regular intervals.

#### **STP Port Status**

This page displays the STP CIST port status for port physical ports in the currently selected switch.

Add new VLAN Save Reset

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
VLAN ID	The VLAN ID for the entry.
MAC Address	The MAC address for the entry.
Port Members	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.
Adding a New Static Entry	Click Add New VLAN to add a new VLAN ID. An empty row is added to the table, and the VLAN can be configured as needed. Legal values for a VLAN ID are 1 through 4095. The VLAN is enabled on the selected stack switch unit when you click on "Save". The VLAN is thereafter present on the other stack switch units, but with no port members. A VLAN without any port members on any stack unit will be deleted when you click "Save". The Delete button can be used to undo the addition of new VLANs.

#### 4.1.6.2 Private VLAN

The Private VLAN membership configurations for the switch can be monitored and modified here. Private VLANs can be added or deleted here. Port members of each Private VLAN can be added or removed here. Private VLANs are based on the source port mask, and there are no connections to VLANs. This means that VLAN IDs and Private VLAN IDs can be identical. A port must be a member of both a VLAN and a Private VLAN to be able to forward packets. By default, all ports are VLAN unaware and members of VLAN 1 and Private VLAN 1.

A VLAN unaware port can only be a member of one VLAN, but it can be a member of multiple Private VLANs.

#### Delete PVLAN ID 1 2 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 3 4 5 6 7 8 9 10 11 Add new Private VLAN Save Reset Label Description Check to delete the entry. It will be deleted during the next save. Delete Private VLAN ID Indicates the ID of this particular private VLAN. **MAC Address** The MAC address for the entry. A row of check boxes for each port is displayed for each private VLAN ID. To include a port in a Private VLAN, check the box. To **Port Members** remove or exclude the port from the Private VLAN, make sure the

Label	Description	
	A check box is provided for each port of a private VLAN.	
Dort Momboro	When checked, port isolation is enabled for that port.	
Port Members	When unchecked, port isolation is disabled for that port.	
	By default, port isolation is disabled for all ports.	

#### 4.1.7 SNMP

4.1.7.1 SNMP-System

# **SNMP System Configuration**

Mode	Enabled	*		
Version	SNMP v2c	*		
Read Community	public			
Write Community	private			
Engine ID	800007e5017f000001			

Label	Description	
	Indicates the SNMP mode operation. Possible modes are:	
Mode	Enabled: Enable SNMP mode operation.	
	Disabled: Disable SNMP mode operation.	
	Indicates the SNMP supported version. Possible versions are:	
Manatan	SNMP v1: Set SNMP supported version 1.	
Version	SNMP v2c: Set SNMP supported version 2c.	
	SNMP v3: Set SNMP supported version 3.	
	Indicates the community read access string to permit access to	
	SNMP agent. The allowed string length is 0 to 255, and the allowed	
Read Community	content is the ASCII characters from 33 to 126.	
Read Community	The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using	
	USM for authentication and privacy and the community string will	
	associated with SNMPv3 communities table	
	Indicates the community write access string to permit access to	
	SNMP agent. The allowed string length is 0 to 255, and the allowed	
Write Community	content is the ASCII characters from 33 to 126.	
	The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using	
	USM for authentication and privacy and the community string will	
	associated with SNMPv3 communities table.	
	Indicates the SNMPv3 engine ID. The string must contain an even	
Engine ID	number between 10 and 64 hexadecimal digits, but all-zeros and	
	all-'F's are not allowed. Change of the Engine ID will clear all original	
	local users.	

# **SNMP Trap Configuration**

Trap Mode	Disabled	*
Trap Version	SNMP v1	*
Trap Community	public	
Trap Destination Address	192.168.10.99	
Trap Authentication Failure	Enabled 💌	
Trap Link-up and Link-down	Enabled	*
Trap Inform Mode	Disabled	~
Trap Inform Timeout (seconds)	1	
Trap Inform Retry Times	5	

Save Reset

Label	Description	
	Indicates the SNMP trap mode operation. Possible modes are:	
Trap Mode	Enabled: Enable SNMP trap mode operation.	
	Disabled: Disable SNMP trap mode operation.	
	Indicates the SNMP trap supported version. Possible versions are:	
Tran Varsian	SNMP v1: Set SNMP trap supported version 1.	
Trap Version	SNMP v2c: Set SNMP trap supported version 2c.	
	SNMP v3: Set SNMP trap supported version 3.	
	Indicates the community access string when send SNMP trap packet.	
Trap Community	The allowed string length is 0 to 255, and the allowed content is the	
	ASCII characters from 33 to 126.	
Trap Destination	Indicates the SNMP trap destination address.	
Address	Trap Destination IPv6 Address	
	Provide the trap destination IPv6 address of this switch. IPv6 address	
	is in 128-bit records represented as eight fields of up to four	
Trap Destination	hexadecimal digits with a colon separates each field (:). For example,	
IPv6 Address	'fe80:215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can	
IF VO AUULESS	be used as a shorthand way of representing multiple 16-bit groups of	
	contiguous zeros; but it can only appear once. It also used a	
	following legally IPv4 address. For example, '::192.1.2.34'.	
Trap	Indicates the SNMP entity is permitted to generate authentication	
Authentication	failure traps. Possible modes are:	
Failure	Enabled: Enable SNMP trap authentication failure.	
i andre	Disabled: Disable SNMP trap authentication failure.	

	Indicates the SNMP trap link-up and link-down mode operation.			
Trap Link-up and	Possible modes are:			
Link-down	Enabled: Enable SNMP trap link-up and link-down mode operation.			
	Disabled: Disable SNMP trap link-up and link-down mode operation.			
	Indicates the SNMP trap inform mode operation. Possible mo			
Trap Inform Mode	are:			
Trap morni Mode	Enabled: Enable SNMP trap inform mode operation.			
	Disabled: Disable SNMP trap inform mode operation.			
Trap Inform	Indicates the SNMP trap inform timeout. The allowed range is 0 to			
Timeout(seconds)	2147.			
Trap Inform Retry	Indicates the SNMP trap inform retry times. The allowed range is 0 to			
Times	255.			
	Indicates the SNMP trap probe security engine ID mode of operation.			
	Possible values are:			
Trap Probe	Enabled: Enable SNMP trap probe security engine ID mode of			
Security Engine ID	operation.			
	Disabled: Disable SNMP trap probe security engine ID mode of			
	operation.			

	Indicates the SNMP trap security engine ID. SNMPv3 sends traps		
	and informs using USM for authentication and privacy. A unique		
	engine ID for these traps and informs is needed. When "Trap Probe		
Trap Security	Security Engine ID" is enabled, the ID will be probed automatically.		
Engine ID	Otherwise, the ID specified in this field is used. The string must		
	contain an even number between 10 and 64 hexadecimal digits, but		
	all-zeros and all-'F's are not allowed.		
Trop Security	Indicates the SNMP trap security name. SNMPv3 traps and informs		
Trap Security	using USM for authentication and privacy. A unique security name is		
Name	needed when traps and informs are enabled.		

#### 4.1.7.2 SNMP-Communities

Configure SNMPv3 communities table on this page. The entry index key is Community.

# **SNMPv3** Communities Configuration

r i i i i i i i i i i i i i i i i i i i		
public	0.0.00	0.0.0.0
private	0.0.00	0.0.0.0

Label	Description	
Delete	Check to delete the entry. It will be deleted during the next save.	
	Indicates the community access string to permit access to SNMPv3	
Community	agent. The allowed string length is 1 to 32, and the allowed content is	
	the ASCII characters from 33 to 126.	
Source IP	Indicates the SNMP access source address.	
Source Mask	Indicates the SNMP access source address mask.	

#### 4.1.7.3 SNMP-Users

Configure SNMPv3 users table on this page. The entry index keys are Engine ID and User Name.

### SNMPv3 Users Configuration

Delete	Engine ID	User Name	Security Level	Authentication Protocol	Authentication Password		Privacy Password	
	800007e5017f000001	default_user	NoAuth, NoPriv	None	None	None	None	
Add ner	Add new user Save Reset							

Label	Description				
Delete	Check to delete the entry. It will be deleted during the next save.				
	An octet string identifying the engine ID that this entry should belong				
	to. The string must contain an even number between 10 and 64				
	hexadecimal digits, but all-zeros and all-'F's are not allowed. The				
	SNMPv3 architecture uses the User-based Security Model (USM) for				
	message security and the View-based Access Control Model (VACM)				
Engine ID	for access control. For the USM entry, the usmUserEngineID and				
Engine iD	usmUserName are the entry's keys. In a simple agent,				
	usmUserEngineID is always that agent's own snmpEngineID value.				
	The value can also take the value of the snmpEngineID of a remote				
	SNMP engine with which this user can communicate. In othe words,				
	if user engine ID equal system engine ID then it is local user;				
	otherwize it's remote user.				
	A string identifying the user name that this entry should belong to.				
User Name	The allowed string length is 1 to 32, and the allowed content is the				
	ASCII characters from 33 to 126.				
	Indicates the security model that this entry should belong to. Possible				
	security models are:				
	NoAuth, NoPriv: None authentication and none privacy.				
Security Level	Auth, NoPriv: Authentication and none privacy.				
	Auth, Priv: Authentication and privacy.				
	The value of security level cannot be modified if entry already exists.				
	That means must first ensure that the value is set correctly.				
Authentication	Indicates the authentication protocol that this entry should belong to.				
Protocol	Possible authentication protocols are:				
FIGUCOI	None: None authentication protocol.				

	MD5: An optional flag to indicate that this user using MD5							
	authentication protocol.							
SHA: An optional flag to indicate that this user								
	authentication protocol.							
	The value of security level cannot be modified if entry already exists.							
	That means must first ensure that the value is set correctly.							
	A string identifying the authentication pass phrase. For MD5							
Authentication	authentication protocol, the allowed string length is 8 to 32. For SHA							
Password	authentication protocol, the allowed string length is 8 to 40. The							
	allowed content is the ASCII characters from 33 to 126.							
	Indicates the privacy protocol that this entry should belong to.							
	Possible privacy protocols are:							
Privacy Protocol	None: None privacy protocol.							
	DES: An optional flag to indicate that this user using DES							
	authentication protocol.							
	A string identifying the privacy pass phrase. The allowed string length							
Privacy Password	is 8 to 32, and the allowed content is the ASCII characters from 33 to							
	126.							

#### 4.1.7.4 SNMP-Groups

Configure SNMPv3 groups table on this page. The entry index keys are Security Model and Security Name.

### **SNMPv3 Groups Configuration**

Delete	Security Model	Security Name	Group Name				
	v1	public	default_ro_group				
	v1	private	default_rw_group				
	v2c	public	default_ro_group				
	v2c	private	default_rw_group				
	usm	default_user	default_rw_group				
Add new group Save Reset							
Label	abel Description						
Dele	<b>Delete</b> Check to delete the entry. It will be deleted during the next save.						

Indicates the security model that this entry should belong to. Possible

**Security Model** 

	security models are:			
	v1: Reserved for SNMPv1.			
	v2c: Reserved for SNMPv2c.			
	usm: User-based Security Model (USM).			
	A string identifying the security name that this entry should belong to.			
Security Name	The allowed string length is 1 to 32, and the allowed content is the			
	ASCII characters from 33 to 126.			
	A string identifying the group name that this entry should belong to.			
Group Name	The allowed string length is 1 to 32, and the allowed content is the			
	ASCII characters from 33 to 126.			

#### 4.1.7.5 SNMP-Views

Configure SNMPv3 views table on this page. The entry index keys are View Name and OID Subtree.

## **SNMPv3 Views Configuration**

Delete	View Name	View Type	OID Subtree			
	default_view	included 💌	.1			
666666	66666666	11111111111				
Add ne	w view 💦 🛛 Sa	ve Reset				

Label	Description			
Delete	Check to delete the entry. It will be deleted during the next save.			
	A string identifying the view name that this entry should belong to.			
View Name	The allowed string length is 1 to 32, and the allowed content is the			
	ASCII characters from 33 to 126.			
	Indicates the view type that this entry should belong to. Possible view			
	types are:			
	included: An optional flag to indicate that this view subtree should be			
View Type	included.			
	excluded: An optional flag to indicate that this view subtree should be			
	excluded.			
	General, if a view entry's view type is 'excluded', it should be exist			

	another view entry which view type is 'included' and it's OID subtree				
overstep the 'excluded' view entry.					
	The OID defining the root of the subtree to add to the named view.				
OID Subtree	The allowed OID length is 1 to 128. The allowed string content is				
	digital number or asterisk(*).				

#### 4.1.7.6 SNMP-Accesses

Configure SNMPv3 accesses table on this page. The entry index keys are Group Name, Security Model and Security Level.

### **SNMPv3 Accesses Configuration**

	occurrey Level	Read view Name	Write View Name
any	NoAuth, NoPriv	default_view 🚩	None 💌
any	NoAuth, NoPriv	default_view 🚩	default_view 🚩
		,	

Label	Description			
Delete	Check to delete the entry. It will be deleted during the next save.			
	A string identifying the group name that this entry should belong to.			
Group Name	The allowed string length is 1 to 32, and the allowed content is the			
	ASCII characters from 33 to 126.			
	Indicates the security model that this entry should belong to. Possible			
	security models are:			
Security Medal	any: Accepted any security model (v1 v2c usm).			
Security Model	v1: Reserved for SNMPv1.			
	v2c: Reserved for SNMPv2c.			
	usm: User-based Security Model (USM).			
	Indicates the security model that this entry should belong to. Possible			
	security models are:			
Security Level	NoAuth, NoPriv: None authentication and none privacy.			
	Auth, NoPriv: Authentication and none privacy.			
	Auth, Priv: Authentication and privacy.			
	The name of the MIB view defining the MIB objects for which this			
Deed View Neme	request may request the current values. The allowed string length is			
Read View Name	1 to 32, and the allowed content is the ASCII characters from 33 to			
	126.			
Write View Name	The name of the MIB view defining the MIB objects for which this			

request may potentially SET new values. The allowed string length is
1 to 32, and the allowed content is the ASCII characters from 33 to
126.

#### 4.1.8 Traffic Prioritization 4.1.8.1 Port Configuration

This page allows you to configure QoS settings for each port.

Frames can be classified by 4 different QoS classes: Low, Normal, Medium, and High.

The classification is controlled by a QCL that is assigned to each port.

A QCL consists of an ordered list of up to 12 QCEs.

Each QCE can be used to classify certain frames to a specific QoS class.

This classification can be based on parameters such as VLAN ID, UDP/TCP port, IPv4/IPv6 DSCP or Tag Priority.

Frames not matching any of the QCEs are classified to the default QoS class for the port.

### Port QoS Configuration

Number of Classes 4 👻

10	Low	~	1	~	0 🗸	Strict Priority 💌	1 ~	2 🗸	4 🗸	8 ~

Label	Description
	A check box is provided for each port of a private VLAN.
Port	When checked, port isolation is enabled for that port.
Pon	When unchecked, port isolation is disabled for that port.
	By default, port isolation is disabled for all ports.

Default Class	Configure the default QoS class for the port, that is, the QoS class					
Default Class	for frames not matching any of the QCEs in the QCL.					
QCL#	Select which QCL to use for the port.					
	Select the default tag priority for this port when adding a Tag to					
Tag Priority	the untagged frames.					
Queuing Mode         Select which Queuing mode for this port.						
Owever Weighted	Setting Queue weighted (Low=Normal, Medium=High) if the					
Queue Weighted	"Queuing Mode" is "Weighted".					

#### 4.1.8.2 QoS Control List

This page lists the QCEs for a given QCL.

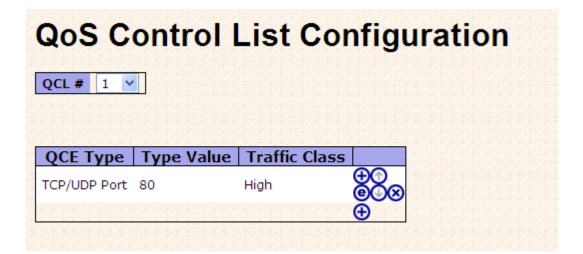

Frames can be classified by 4 different QoS classes: Low, Normal, Medium, and High.

The classification is controlled by a QoS assigned to each port.

A QCL consists of an ordered list of up to 12 QCEs.

Each QCE can be used to classify certain frames to a specific QoS class.

This classification can be based on parameters such as VLAN ID, UDP/TCP port, IPv4/IPv6 DSCP or Tag Priority. Frames not matching any of the QCEs are classified to the default QoS Class for the port.

Label	Description
001#	Select a QCL to display a table that lists all the QCEs for that
QCL#	particular QCL.
	Specifies which frame field the QCE processes to determine the
	QoS class of the frame.
	The following QCE types are supported:
	Ethernet Type: The Ethernet Type field. If frame is tagged, this is
	the Ethernet Type that follows the tag header.
	VLAN ID: VLAN ID. Only applicable if the frame is VLAN tagged.
QCE Tyep	TCP/UDP Port: IPv4 TCP/UDP source/destination port.
	DSCP: IPv4 and IPv6 DSCP.
	ToS: The 3 precedence bit in the ToS byte of the IPv4/IPv6 header
	(also known as DS field).
	Tag Priority: User Priority. Only applicable if the frame is VLAN
	tagged or priority tagged.
	Indicates the value according to its QCE type.
	Ethernet Type: The field shows the Ethernet Type value.
Type Value	VLAN ID: The field shows the VLAN ID.
	TCP/UDP Port: The field shows the TCP/UDP port range.
	DSCP: The field shows the IPv4/IPv6 DSCP value.
Traffic Class	The QoS class associated with the QCE.
	You can modify each QCE in the table using the following buttons:
	🕀 : Inserts a new QCE before the current row.
	e : Edits the QCE.
Modification Buttons	① : Moves the QCE up the list.
Mouncation Buttons	🕑 : Moves the QCE down the list.
	😣 : Deletes the QCE.
	$igodoldsymbol{\Theta}$ : The lowest plus sign adds a new entry at the bottom of the
	list of QCL.

#### 4.1.8.3 Storm Control

Reset

Save

Storm control for the switch is configured on this page.

### **Storm Control Configuration**

Frame Type	Status	Rate (p	ops)
Unicast		1	~
Multicast		1	*
Broadcast		1	*

There is a unicast storm rate control, multicast storm rate control, and a broadcast storm rate control. These only affect flooded frames, i.e. frames with a (VLAN ID, DMAC) pair not present on the MAC Address table.

The rate is 2<sup>n</sup>, where n is equal to or less than 15, or "No Limit". The unit of the rate can be either pps (packets per second) or kpps (kilopackets per second). The configuration indicates the permitted packet rate for unicast, multicast, or broadcast traffic across the switch. (Note: Frames, which are sent to the CPU of the switch are always limited to aproximately 4 kpps. For example, broadcasts in the management VLAN are limited to this rate. The management VLAN is configured on the IP setup page.)

Label	Description
Eromo Turo	The settings in a particular row apply to the frame type listed here:
Frame Type	unicast, multicast, or broadcast.
Status	Enable or disable the storm control status for the given frame type.
	The rate unit is packet per second (pps), configure the rate as 1, 2, 4,
Rate	8, 16, 32, 64, 128, 256, 512, 1K, 2K, 4K, 8K, 16K, 32K, 64K, 128K,
	256K, 512K, or 1024K.
	The 1 kpps is actually 1002.1 pps.

#### 4.1.8.4 Wizard

This handy wizard helps you set up a QCL quickly.

### Welcome to the QCL Configuration Wizard!

Please select an action:

- Set up IP Cam High Performance Increase IP Cam performance.
- O Set up Port Policies

Group ports into several types according to different QCL policies.

- Set up Typical Network Application Rules
   Set up the specific QCL for different typical network application quality control.
- Set up ToS Precedence Mapping
   Set up the traffic class mapping to the precedence part of ToS (3 bits) when receiving IPv4/IPv6 packets.

#### ○ Set up VLAN Tag Priority Mapping

Set up the traffic class mapping to the user priority value (3 bits) when receiving VLAN tagged packets. To continue, click Next.

Next >

Label	Description
Set up	Group ports into several types according to different QCL policies.
Port Policies	Group ports into several types according to different QCL policies.
Set up Typical	Set up the specific QCL for different typical network application
Network	quality control.
Application Rules	quaity control.
Set up ToS	Set up the traffic class mapping to the precedence part of ToS (3 bits)
Precedence	when receiving IPv4/IPv6 packets.
Mapping	when receiving if value vo packets.
Set up VLAN Tag	Set up the traffic class mapping to the User Priority value (3 bits)
Priority Mapping	when receiving VLAN tagged packets.

#### 4.1.9 IGMP Snooping

#### 4.1.9.1 IGMP Snooping

This page provides IGMP Snooping related configuration.

## **IGMP Snooping Configuration**

5			1813	

### **Client Configuration**

The table has one row for each Client and a number of columns, which are:

Label	Description								
Client	The Client for which the configuration below applies.								
Authentication	Authentication Method can be set to one of the following values:								
Metohd	none : authentication is disabled and login is not possible.								
	local : use the local user database on the switch stack for								
	authentication.								
	radius : use a remote RADIUS server for authentication.								
	tacacs+ : use a remote TACACS+ server for authentication.								
Fallback	Enable fallback to local authentication by checking this box.								
	If none of the configured authentication servers are alive, the local								
	user database is used for authentication.								
	This is only possible if the Authentication Method is set to								
	something else than 'none or 'local'.								
Save	Click to save changes.								
Reset	Click to undo any changes made locally and revert to previously								
Reset	saved values.								

### Common Server Configuration

These setting are common for all of the Authentication Servers.

Label	Description								
	The Timeout, which can be set to a number between 3 and 3600								
	seconds, is the maximum time to wait for a reply from a server.								
	If the server does not reply within this timeframe, we will consider								
	it to be dead and continue with the next enabled server (if any).								
Timeout	RADIUS servers are using the UDP protocol, which is unreliable								
	by design. In order to cope with lost frames, the timeout interval is								
	divided into 3 subintervals of equal length. If a reply is not								
	received within the subinterval, the request is transmitted again.								
	This algorithm causes the RADIUS server to be queried up to 3								
	times before it is considered to be dead.								
	The Dead Time, which can be set to a number between 0 and								
	3600 seconds, is the period during which the switch will not send								
	new requests to a server that has failed to respond to a previous								
Dead Time	request. This will stop the switch from continually trying to contact								
	a server that it has already determined as dead.								
	Setting the Dead Time to a value greater than 0 (zero) will enable								
	this feature, but only if more than one server has been configured.								

### **RADIUS** Authentication Server Configuration

The table has one row for each RADIUS Authentication Server and a number of columns, which are:

Label	Description													
#	The RADIUS Authentication Server number for which the													
	configuration below applies.													
Enable	Enable the RADIUS Authentication Server by checking this box.													
IP Address	Enable fallback to local authentication by checking this box.													
	If none of the configured authentication servers are alive, the local													
	user database is used for authentication.													
	This is only possible if the Authentication Method is set to													
	something else than 'none or 'local'.													

Port	The UDP port to use on the RADIUS Authentication Server. If the
	port is set to 0 (zero), the default port (1812) is used on the
	RADIUS Authentication Server.
Coarot	The secret - up to 29 characters long - shared between the
Secret	RADIUS Accounting Server and the switchstack.

## 4.1.11 Monitor and Diag

# 4.1.11.1 MAC Table

The MAC Address Table is configured on this page. Set timeouts for entries in the dynamic MAC Table and configure the static MAC table here.

### **MAC Address Table Configuration**

### Aging Configuration

By default, dynamic entries are removed from the MAC after 300 seconds. This removal is also called aging.

Configure aging time by entering a value here in seconds; for example, Age

time seconds.

The allowed range is 10 to 1000000 seconds.

Disable the automatic aging of dynamic entries by checking Disable automatic aging.

### MAC Table Learning

If the learning mode for a given port is grayed out, another module is in control of the mode, so that it cannot be changed by the user. An example of such a module is the MAC-Based Authentication under 802.1X.

Each port can do learning based upon the following settings:

MAC Table Learni	ing
------------------	-----

	Port Members																											
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28
Auto	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲	۲
Disable	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Secure	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Label	Description
Auto	Learning is done automatically as soon as a frame with unknown
Auto	SMAC is received.
Disable	No learning is done.
	Only static MAC entries are learned, all other frames are dropped.
	Note: Make sure that the link used for managing the switch is
Secure	added to the Static Mac Table before changing to secure learning
Secure	mode, otherwise the management link is lost and can only be
	restored by using another non-secure port or by connecting to the
	switch via the serial interface.

### Static MAC Table Configuration

The static entries in the MAC table are shown in this table. The static MAC table can contain 64 entries.

The maximum of 64 entries is for the whole stack, and not per switch.

The MAC table is sorted first by VLAN ID and then by MAC address.

Label	Description					
Delete	Check to delete the entry. It will be deleted during the next save.					
VLAN ID	The VLAN ID for the entry.					
MAC Address	The MAC address for the entry.					
Port Members	Checkmarks indicate which ports are members of the entry.					
Port members	Check or uncheck as needed to modify the entry.					
Adding a New Static	Add new static entry					
Entry	Click Click to add a new entry to the					

static MAC table. Specify the VLAN ID, MAC address, and port
members for the new entry. Click "Save".

### 4.1.11.2 Mirroring

Configure port Mirroring on this page.

To debug network problems, selected traffic can be copied, or mirrored, to a mirror port where

a frame analyzer can be attached to analyze the frame flow.

The traffic to be copied to the mirror port is selected as follows:

All frames received on a given port (also known as ingress or source mirroring).

All frames transmitted on a given port (also known as egress or destination mirroring).

Port to mirror also known as the mirror port. Frames from ports that have either source (rx) or destination (tx) mirroring enabled are mirrored to this port. Disabled disables mirroring.

Mirror Configuration														
Port to	mirror to	Di	sabl	ed	1	•								
Port	Mode	222												
1	Disabled	~												
2	Disabled	~	20											
3	Disabled	~												
4	Disabled	~	20											
5	Disabled	~	20											
6	Disabled	~												
7	Disabled	~	20											

Label	Description
Port	The logical port for the settings contained in the same row.
	Select mirror mode.
	Rx only : Frames received at this port are mirrored to the mirror port.
	Frames transmitted are not mirrored.
	Tx only :Frames transmitted from this port are mirrored to the mirror
	port. Frames received are not mirrored.
Mode	Disabled : Neither frames transmitted nor frames received are
	mirrored.
	Enabled : Frames received and frames transmitted are mirrored to
	the mirror port.

Note: For a given port, a frame is only transmitted once. It is
therefore not possible to mirror Tx frames for the mirror port.
Because of this, mode for the selected mirror port is limited to
Disabled or Rx only.

### 4.1.11.3 System Log Information

The switch system log information is provided here.

System Log Information										
Auto-refresh 🗌 Refresh Clear 🛛 << >> >>										
Level All 👻										
The total number of entr	ries is 0 for the giv	ven level.								
Start from ID 1 with 20 entries per page.										
ID	Level Time	Message

28	0	0	0	0	0	0	0	0	C	

Label	Description
Port	The logical port for the settings contained in the same row.
Packets	The number of received and transmitted packets per port.
Bytes	The number of received and transmitted bytes per port.
Erroro	The number of frames received in error and the number of
Errors	incomplete transmissions per port.
Dropo	The number of frames discarded due to ingress or egress
Drops	congestion.
Filtered	The number of received frames filtered by the forwarding process.
Auto-refresh	Check this box to enable an automatic refresh of the page at regular
Auto-reliesh	intervals.
Refresh         Updates the counters entries, starting from the current entry	
Clear	Flushes all counters entries.

### 4.1.11.6 Detailed Statistics

This page provides detailed traffic statistics for a specific switch port. Use the port select box to select which switch port details to display.

The displayed counters are the totals for receive and transmit, the size counters for receive and transmit, and the error counters for receive and transmit.

### Detailed Statistics-Receive & Transmit Total

### **Detailed Port Statistics Port 1**

Port 1 💌 Auto-refresh 🗌 Refresh Clear

Receive Total		Transmit Total	
Rx Packets	0	Tx Packets	0
Rx Octets	0	Tx Octets	0
Rx Unicast		Tx Unicast	0
Rx Multicast		Tx Multicast	0
Rx Broadcast		Tx Broadcast	0
Rx Pause	0	Tx Pause	0
Receive Size Counters		Transmit Size Counters	
Rx 64 Bytes		Tx 64 Bytes	0
Rx 65-127 Bytes		Tx 65-127 Bytes	0
Rx 128-255 Bytes		Tx 128-255 Bytes	0
Rx 256-511 Bytes		Tx 256-511 Bytes	0
Rx 512-1023 Bytes		Tx 512-1023 Bytes	0
Rx 1024-1526 Bytes		Tx 1024-1526 Bytes	0
Rx 1527- Bytes	0	Tx 1527- Bytes	0
Receive Queue Counters		Transmit Queue Counters	
Rx Low		Tx Low	0
Rx Normal		Tx Normal	0
Rx Medium		Tx Medium	0
Rx High	0	Tx High	0
Receive Error Counters		Transmit Error Counters	
Rx Drops	0	Tx Drops	0
Rx CRC/Alignment	0	Tx Late/Exc. Coll.	0
Rx Undersize	0		
Rx Oversize	0		
Rx Fragments	0		
Rx Jabber	0		
Rx Filtered	0		

Label	Description
Rx and Tx Packets	The number of received and transmitted (good and bad) packets.
By and Ty Octobe	The number of received and transmitted (good and bad) bytes.
Rx and Tx Octets	Includes FCS, but excludes framing bits.
Rx and Tx Unicast	The number of received and transmitted (good and bad) unicast
	packets.
Rx and Tx	The number of received and transmitted (good and bad) multicast
Multicast	packets.
Rx and Tx	The number of received and transmitted (good and bad) broadcast
Broadcast	packets.
Rx and Tx Pause	A count of the MAC Control frames received or transmitted on this
KX and TX Fause	port that have an opcode indicating a PAUSE operation.
By Dropo	The number of frames dropped due to lack of receive buffers or
Rx Drops	egress congestion.
Rx	The number of frames received with CRC or alignment errors.

CRC/Alignment	
Rx Undersize	The number of short 1 frames received with valid CRC.
Rx Oversize	The number of long 2 frames received with valid CRC.
Rx Fragments	The number of short 1 frames received with invalid CRC.
Rx Jabber	The number of long 2 frames received with invalid CRC.
Rx Filtered	The number of received frames filtered by the forwarding process.
Tx Drops	The number of frames dropped due to output buffer congestion.
Tx Late / Exc.Coll.	The number of frames dropped due to excessive or late collisions.

Short frames are frames that are smaller than 64 bytes.

Long frames are frames that are longer than the configured maximum frame length for this port.

### 4.1.11.7 Ping

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues.

After you press Start, 5 ICMP packets are transmitted, and the sequence number

and roundtrip time are displayed upon reception of a reply. The page refreshes automatically until responses to all packets are received, or until a timeout occurs.

PING6 server ::10.10.132.20 64 bytes from ::10.10.132.20: icmp\_seq=0, time=0ms 64 bytes from ::10.10.132.20: icmp\_seq=1, time=0ms 64 bytes from ::10.10.132.20: icmp\_seq=2, time=0ms 64 bytes from ::10.10.132.20: icmp\_seq=3, time=0ms 64 bytes from ::10.10.132.20: icmp\_seq=4, time=0ms Sent 5 packets, received 5 OK, 0 bad

You can configure the following properties of the issued ICMP packets:

Label	Description
IP Address	The destination IP Address.
Ping Size	The payload size of the ICMP packet. Values range from 8 bytes
	to 1400 bytes.

### 4.1.11.8 VeriPHY

This page is used for running the VeriPHY Cable Diagnostics.

/er	iPH\	( Cabl	e Di	agnos	tics			
Port	All 💙							
22.2								
Start								
				Cable Stat	us			
Port	Pair A	Length A	Pair B	Length B	Pair C	Length C	Pair D	Length

22								
23	(1770	7.5	0770			775	1775	
24								

Press l

Start

to run the diagnostics. This will take approximately 5 seconds. If all

ports are selected, this can take approximately 15 seconds. When completed, the page refreshes automatically, and you can view the cable diagnostics results in the cable status table. Note that VeriPHY is only accurate for cables of length 7 - 140 meters.

10 and 100 Mbps ports will be linked down while running VeriPHY. Therefore, running VeriPHY on a 10 or 100 Mbps management port will cause the switch to stop responding until VeriPHY is complete.

Label	Description
Port	The port where you are requesting VeriPHY Cable Diagnostics.
Cable Status	Port: Port number.
	Pair: The status of the cable pair.
	Length: The length (in meters) of the cable pair.

### System Reboot

You can reset the stack switch on this page. After reset, the system will boot normally as if you had powered-on the devices

Warm Reset						
Are you	sure you want to perform a Warm Restart?					
Yes No						
Label	Description					
Yes	Click to reboot device.					
No	Click to return to the Port State page without rebooting.					

### **Factory Defaults**

You can reset the configuration of the stack switch on this page. Only the IP configuration is retained.

### **Factory Defaults**

### Are you sure you want to reset the configuration to Factory Defaults?

Yes No

Label	Description
Yes	Click to reset the configuration to Factory Defaults.
No	Click to return to the Port State page without resetting the configuration

# Command Line Interface Management

### 6.1 About CLI Management

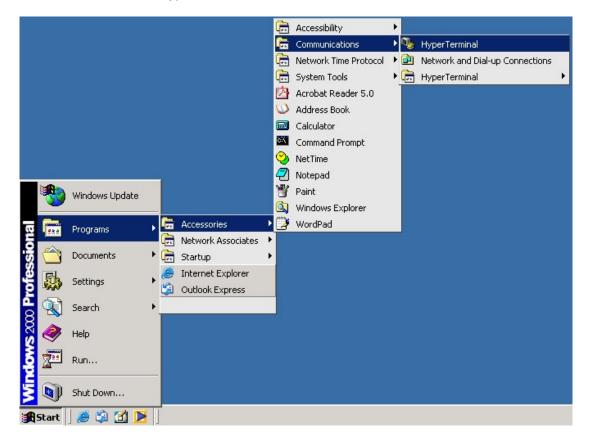

Besides WEB-base management, RGS-7244GP also support CLI management. You can use console or telnet to management switch by CLI.

### CLI Management by RS-232 Serial Console (115200, 8, none, 1, none)

Before Configuring by RS-232 serial console, use an DB9-M to DB9-F cable to connect the Switches' RS-232 Console port to your PC's COM port.

Follow the steps below to access the console via RS-232 serial cable.

Step 1. From the Windows desktop, click on Start -> Programs -> Accessories -> Communications -> Hyper Terminal

#### Step 2. Input a name for new connection

New Connection - HyperTerminal		- 🗆 ×
File Edit View Call Transfer Help		
	Connection       2 ×         Image: New Connection       Enter a name and choose an icon for the connection:         Name:       Image: New Connection         Icon:       Image: New Connection	
Disconnected Auto detect	Auto detect SCROLL CAPS NUM Capture Print echo	

Step 3. Select to use COM port number

- -	Connect To	? X	
	Enter details for the phone number the         Country/region:         Taiwan (886)         Arga code:         Phone number:         Cognect using:	at you want to dial:	
	OK	Cancel	

Step 4. The COM port properties setting, 115200 for Bits per second, 8 for Data bits, None for Parity, 1 for Stop bits and none for Flow control.

COM1 Properties	minal		<u>?</u> ×						-03	<
Port Settings			1							-
Bits per seco	nd: 9600	<u>•</u>	1							-
Data I	oits: 8	<u>•</u>	1							
Pa	rity: None	<u> </u>	1							
Stop I	oits: 1	<b>•</b>	1							
Flow con	trol: None	<u>•</u>	1							
		Restore Defa	ults							
	ок	Cancel	Apply							
Disconnected	Auto detect	Auto detect	SCROLL	CAPS	NUM	Capture	Print echo			-

Step 5. The Console login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser), then press "**Enter**".

Username:

#### **CLI Management by Telnet**

Users can use "TELNET" to configure the switches.

The default value is as below:

IP Address: 192.168.10.1

Subnet Mask: 255.255.255.0 Default Gateway: 192.168.10.254 User Name: root Password: root

Follow the steps below to access the console via Telnet.

Step 1. Telnet to the IP address of the switch from the Windows "**Run**" command (or from the MS-DOS prompt) as below.

Run	<u>?</u> ×
7	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
Open:	telnet 192.168.10.1
	OK Cancel Browse

Step 2. The Login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser ), and then press "**Enter**"

Username:

# **Technical Specifications**

ORing Switch Model	RGS-7244GP
Physical Ports	
10/100/1000 Base-T(X) Ports in RJ45	
Auto MDI/MDIX	24
1000Base-X SFP Port	4
Technology	
Ethernet Standards	IEEE 802.3 for 10BaseT, IEEE 802.3u for 100BaseT(X), IEEE 802.3ab for 1000Base-T IEEE 802.z for 1000Base-X IEEE 802.3x for Flow control IEEE 802.3ad for LACP (Link Aggregation Control Protocol ) IEEE 802.3ad for LACP (Link Aggregation Control Protocol ) IEEE 802.1p for COS (Class of Service) IEEE 802.1p for COS (Class of Service) IEEE 802.1Q for VLAN Tagging IEEE 802.1Q for VLAN Tagging IEEE 802.1D for STP (Spanning Tree Protocol) IEEE 802.1w for RSTP (Rapid Spanning Tree Protocol) IEEE 802.1s for MSTP (Multiple Spanning Tree Protocol) IEEE 802.1x for Authentication IEEE 802.1AB for LLDP (Link Laver Discovery Protocol)
	IEEE 802.1AB for LLDP (Link Layer Discovery Protocol)
MAC Table	8K 4
Priority Queues Processing	4 Store-and-Forward
Processing	Store-and-Forward Switching latency: 7 us
Switch Properties	Switching bandwidth: 56Gbps Max. Number of Available VLANs: 4,096 IGMP multicast groups: 128 for each VLAN Port rate limiting: User Define
Jumbo frame	Up to 9K Bytes
Security Features	IP Police security feature Enable/disable ports, MAC based port security Port based network access control (802.1x) VLAN (802.1Q) to segregate and secure network traffic Radius centralized password management SNMPv3 encrypted authentication and access security
Software Features	STP/RSTP/MSTP (IEEE 802.1D/w/s) Redundant Ring (O-Ring) with recovery time less than 20ms over 250 units TOS/Diffserv supported Quality of Service (802.1p) for real-time traffic VLAN (802.1Q) with VLAN tagging and GVRP supported IGMP Snooping IP based bandwidth management Application based QoS management DOS/DDOS auto prevention Port configuration, status, statistics, monitoring, security DHCP Client/Server
Network Redundancy	O-Ring Open-Ring STP / RSTP compatible MSTP
RS-232 Serial Console Port	RS-232 in DB9 connector with console cable. 115200bps, 8, N, 1
LED Indicators	
Power Indicator	Green : For AC power indicator
System Ready Indicator	Green : Indicate system ready
R.M. Indicator	Green : Indicate system operated in O-Ring Master mode
O-Ring Indicator	Green : Indicate system operated in O-Ring mode

10/100/1000Base-T(X) RJ45 Port	
Indicator	Green for port Link/Act. Amber for 100Mbps indicator
1000Base-X SFP Port Indicator	Green for port Link/Act.
Power	
Redundant Input Power	100 ~ 240VAC with power cord
Power Consumption (Typ.)	36 Watts
Overload Current Protection	Present
Physical Characteristic	
Enclosure	19 inches rack mountable
Dimension (W x D x H)	443.7 (W) x 200 (D) x 44 (H) mm
Weight (g)	2700g
Environmental	
Storage Temperature	-40 to 85°C (-40 to 185°F)
Operating Temperature	-10 to 60°C (14 to 140°F )
Operating Humidity	5% to 95% Non-condensing
Regulatory approvals	
EMI	FCC Part 15, CISPR (EN55022) class A
EMS	EN61000-4-2 (ESD) EN61000-4-3 (RS), EN61000-4-4 (EFT), EN61000-4-5 (Surge), EN61000-4-6 (CS), EN61000-4-8, EN61000-4-11
Shock	IEC60068-2-27
Free Fall	IEC60068-2-32
Vibration	IEC60068-2-6
Warranty	2 years
